

Methods

Agenda

- What is a method?
- Why do we use method?

Methods are functionalities that an entity can perform

Methods are also known as instance methods

First parameter it takes is self and it allows 0 or more parameters apart from self

All the parameters specified needs to get passed as arguments in the correct order when they are called for execution

Method can be used to add new instance attributes

Summary

- Methods are functionalities that an entity can perform
- First parameter it takes is self and it allows 0 or more parameters apart from self
- All the parameters specified needs to get passed as arguments in the correct order when they are called for execution
